

# CONSTIX™ Swab, SF-7

Sealed foam swab, flexible tip

## Description

CONSTIX SF-7 swab consists of 100 PPI polyurethane foam adhesive-bonded to a flexible nylon tip. The tip is mechanically secured in a tubular polypropylene handle.

The polyurethane foam head provides good particles entrapment and removal. The absorbent foam enables solvents, such as isopropanol and ethanol, to be readily sorbed for applications involving solvent delivery and removal. Head size enables access to small areas and crevices.

Though compatible with many common solvents, the SF-7 is not recommended for use with ketones such as acetone or MEK.

## Technical Data

|                      |   |
|----------------------|---|
| Swab head material   | 100 PPI closed-cell polyurethane foam                                   |
| Swab handle material | Polypropylene handle and nylon tip                                      |
| Construction         | Adhesive-bonded foam to tip; tip mechanically secured in tubular handle |

### Notes:

- 1) Data shown are typical values and should not be used as product specifications.
- 2) Valid product comparisons may only be obtained through side-by-side testing in the same test facility, under similar conditions.
- 3) Current and/or comparison data may be available. Please contact a Contec sales representative for details.
