

Septihol[®] st Alcohol Solution products kill a range of Gram-positive and Gram-negative bacteria, and have fungicidal activity against *Trychophyton interdigitale*. Its EPA biocidal and fungicidal claims are proven in presence of 5% organic soil on hard, nonporous surfaces. Septihol st is double bagged and gamma irradiated for use in aseptic areas. The formula is a blend of 70% (v/v) USP isopropyl alcohol and 30% USP Purified Water. It does not contain stabilizers or denaturants, so it evaporates quickly and completely. Septihol st Alcohol Solution is ideal as a final microbial control and disinfection step to remove residue from surfaces and to decontaminate gloves. This product has an extensive documentation package to meet your validation objectives and is supported by the STERIS Technical Services team for individualized application and validation assistance.

Septihol[®] st Alcohol Solution

Ideal for microbial control, residue removal, and glove decontamination

FEATURES	BENEFITS
EPA biocidal and fungicidal claims on hard, nonporous surfaces in the presence of 5% organic soil	Facilitates use as part of a qualified microbial control program
Formulation is ready to use without any mixing	Easy to use and saves the time and labor of disinfectant preparation Eliminates errors in dilution preparation and the need to validate preparation procedures
Evaporates quickly	Ability to maintain visibly clean facilities without rinsing after every application. Very low residue on surfaces
Formulated without stabilizers or denaturants	Least amount of residue on surface
Superior material compatibility	Allows for high frequency use on most surfaces
Filtered to 0.22 micron	Reduces particulate levels
Gamma irradiated and each lot USP sterility tested	Facilitates introduction into your critical areas
Manufactured in accordance with cGMP with complete lot traceability	Supports quality assurance and quality control

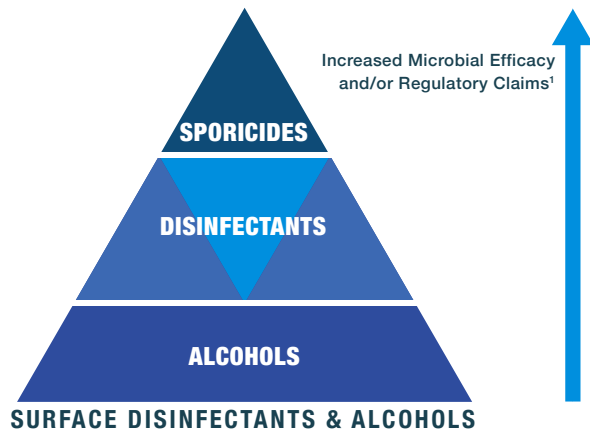

APPLICATIONS

Microbial control and residue removal from:

- Equipment
- BSL hoods
- Countertops
- Gloves
- Laminar flow curtains
- Windows

Products may be applied by:

- Wiping
- Spraying

*Products that fall into the categories at the bottom of the pyramid are most frequently used and are generally not sporicidal. Progression up the pyramid indicates stronger performance overall and a broader spectrum of claims.

An important aspect to any microbial control program is including rinsing on some frequency to control residues. Septihol st Alcohol Solution is ideal for this important application. Its biocidal and fungicidal activity provides an additional level of microbial control during the final step of disinfecting aseptic areas. Formulated without surfactants or stabilizers, the use of Septihol st Alcohol Solution as part of a rinsing routine will maintain a clean, residue-free environment. Our Technical Service group can help customize your contamination control program to take advantage of this excellent product.
